

01

EVERYTHING FEELS LOUD.

**Too much everywhere. Too many things
pulling at our attention.**

- A lot of people feel overexhausted right now.
- The real question is how we cut through the noise and find clarity again.

02

CODEX IS A BUILD PARTNER.

**It helps you think, build, organize,
and create faster.**

- It can help turn ideas into real assets.
- It works best when you use it as a guide and builder, not just a chatbot.

03

TODAY WE'LL DO THREE THINGS.

A simple walk-through, not a deep dive.

- See what Codex is.
- Walk through how to use it.
- Watch a simple demo together.

04

FROM IDEA TO SLIDE DECK.

How I used Codex to create a slide-deck skill.

- We will look at one real example instead of staying theoretical.
- That makes it easier to see what Codex can actually do.

05

HOW YOU COULD USE IT.

Simple practical ways to start.

- Build workflows and systems.
- Create decks, documents, and assets.
- Turn rough thoughts into something usable.

LET'S OPEN IT UP.

**Questions, ideas, or something you
want to see built live.**

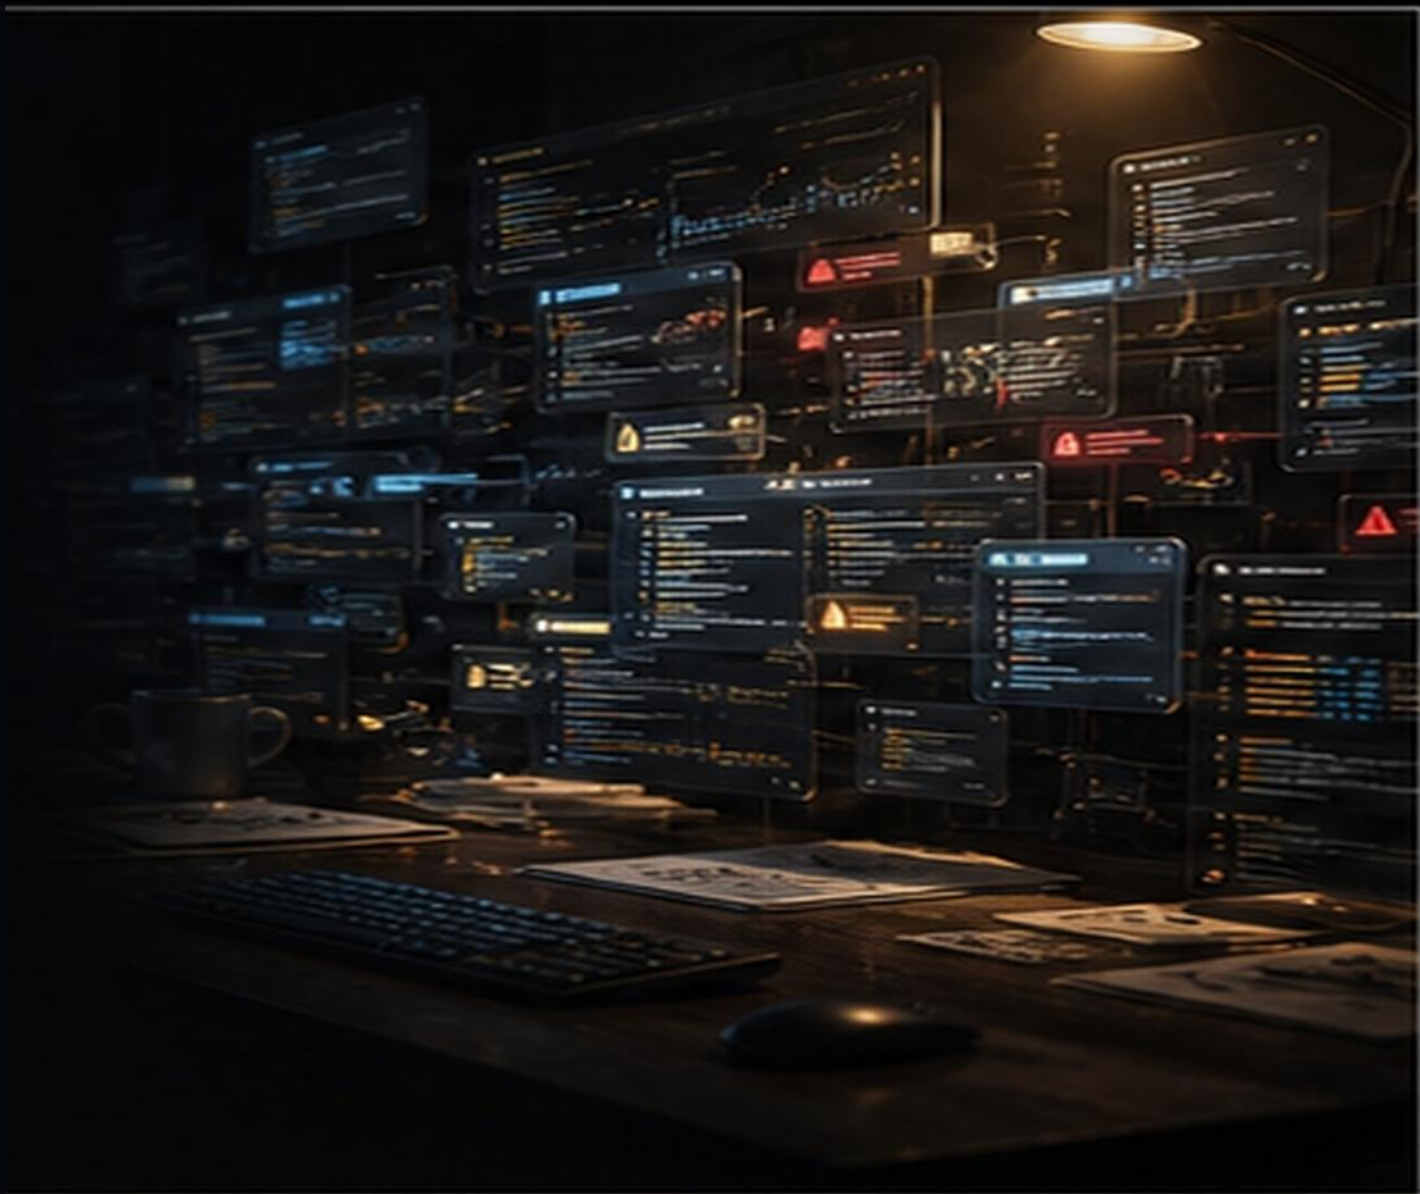

- We can keep it practical and interactive.
- If something is useful, we can explore it together.

EVERY PROBLEM GETS A LOGIN.

Buy first. Think later.

- The default move is another tool.
- Software gets added before the problem gets defined.

THE STACK KEEPS GROWING.

One tool becomes twelve.

- Each app solves one isolated pain point.
- The stack expands faster than the strategy.

MORE SOFTWARE, LESS RELIEF.

Complexity compounds.

- More tools do not automatically create clarity.
- Every platform adds setup, maintenance, and decisions.

04

NOW YOU MANAGE THE TOOLS.

Instead of the business.

- The stack starts demanding daily attention.
- The business loses clean focus and momentum.

COGNITIVE COST IS REAL.

Attention gets fragmented.

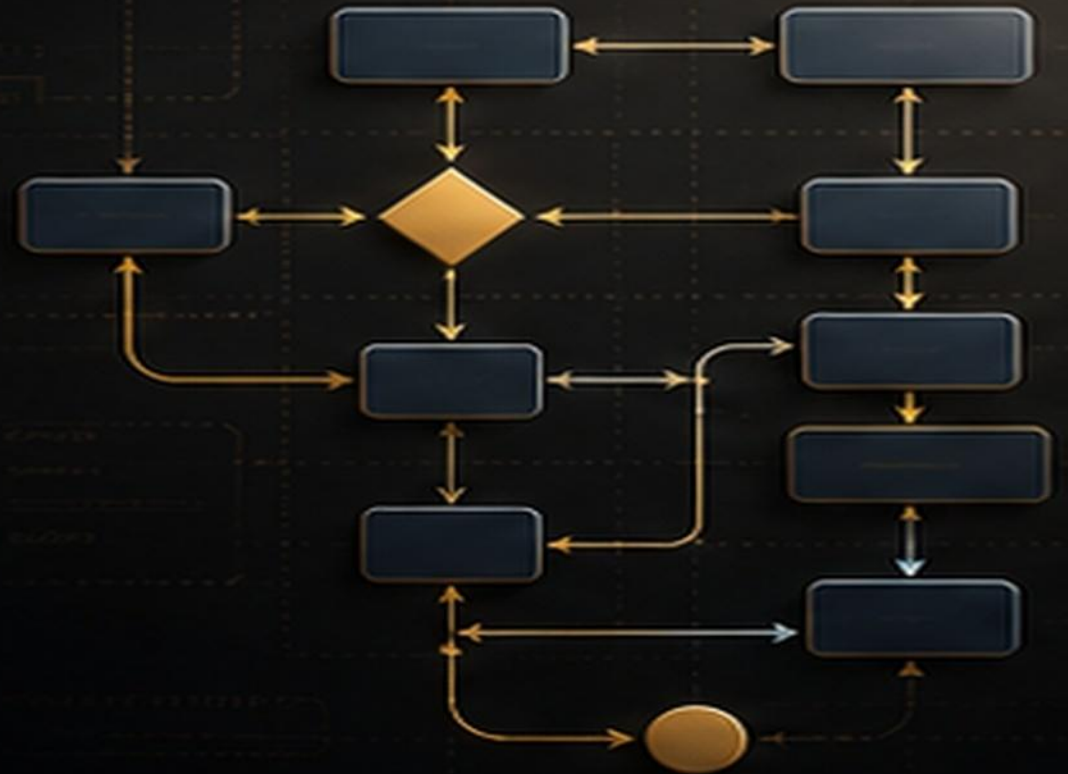

- Constant switching burns real energy.
- Mental clutter becomes operational clutter.

ONE WORKFLOW AT A TIME.

Reduce moving parts.

- Simplify the problem before you scale it.
- Small wins rebuild confidence quickly.

GIVE EACH TOOL A JOB.

Each system solves one thing.

- Every tool needs one clear role.
- Purpose removes stack confusion.

SUBTRACT TO STRENGTHEN.

Remove what clouds execution.

- Subtraction is often the real upgrade.
- Less noise makes better momentum possible.

10

BUILD THE OPERATING MAP.

Connect what stays.

- What remains should connect with intention.
- The system should make decisions easier.

FREEDOM IS DESIGNED.

Simpler systems scale better.

- Freedom comes from structure that fits.
- Clarity makes growth feel lighter.

THIS IS CONSULTANT WORK.

Reduce noise. Restore direction.

- A consultant turns complexity into sequence.
- Direction is what people actually pay for.
